

Caspase-12 Fluorometric Assay Kit

(Catalog #K139-25, -100; Store at -20°C)

I. Introduction:

Caspase family of proteases are the central mediators of apoptosis in mammalian cells. The **Caspase-12 Fluorometric Assay Kit** provides a simple and convenient means for assaying the activity of caspases that recognize the sequence ATAD. The assay is based on detection of cleavage of substrate ATAD-AFC (AFC: 7-amino-4-trifluoromethyl coumarin). ATAD-AFC emits blue light (\(\lambda\max = 400 \text{ nm}\)); upon cleavage of the substrate by caspase-12 or related caspases, free AFC emits a yellow-green fluorescence (\(\lambda\max = 505 \text{ nm}\)), which can be quantified using a fluorometer or a fluorecence microtiter plate reader. Comparison of the fluorescence of AFC from an apoptotic sample with an uninduced control allows determination of the fold increase in caspase-12 activity.

II. Kit Contents:

Components	K139-25	K139-100	Part Number
	25 assays	100 assays	
Cell Lysis Buffer 2X Reaction Buffer ATAD-AFC (1 mM) DTT (1 M)	25 ml 2 ml 125 µl 100 µl	100 ml 4 x 2 ml 0.5 ml 0.4 ml	K139-XX(X)-1 K139-XX(X)-2 K139-XX(X)-3 K139-XX(X)-4

III. Caspase-12 Assay Protocol:

A. General Considerations

- Aliquot enough 2X Reaction Buffer for the number of assays to be performed.
 Add DTT to the 2X Reaction Buffer immediately before use (10 mM final concentration: add 10 µl of 1.0 M DTT stock per 1 ml of 2X Reaction Buffer).
- After thawing, store the Cell Lysis Buffer and 2X Reaction Buffer at 4°C.
- Protect ATAD-AFC from light.

B. Assay Procedure

- Induce apoptosis in cells by desired method. Concurrently incubate a control culture without induction.
- Count cells and pellet 2-5 x 10⁶ cells or use 100-300 μg cell lysates if protein concentration has been measured.
- 3. Resuspend cells in 50 µl of chilled Cell Lysis Buffer. Incubate on ice for 10 min.
- 4. Add 50 µl of 2X Reaction Buffer (containing 10 mM DTT) to each sample.
- Add 5 μl of the ATAD-AFC substrate (50 μM final concentration) and incubate at 37°C for 1-2 hour.
- 6. Read samples in a fluorometer equipped with a 400-nm excitation filter and 505-nm emission filter. For a plate-reading set-up, transfer the samples to a 96-well plate. You may also perform the entire assay directly in a 96-well plate. Fold-increase in caspase-12 activity can be determined by comparing these results with the level of the uninduced control.

IV. Storage and Stability:

Store kit at -20°C (Store Cell Lysis Buffer & 2X Reaction Buffer at 4°C after opening). All reagents are stable for 6 months from date of receipt under proper storage conditions.

/ery few cells used for analysis	, , , , , , , , , , , , , , , , , , , ,
,	Defer to detechant for appropriate call number
	Refer to datasheet for appropriate cell number
Use of samples stored for a long time	Use fresh samples or aliquot and store and use within one month for the assay
ncorrect setting of the equipment used to read samples	Refer to datasheet and use the recommended filter setting
Allowing the reagents to sit for extended times on ice	Always thaw and prepare fresh reaction mix before use
Jneven number of cells seeded in the wells	Seed only equal number of healthy cells (correct passage number)
Samples prepared in a different buffer	Use the cell lysis buffer provided in the kit
Adherent cells dislodged and lost at the time of experiment	Perform experiment gently and in duplicates/triplicates; apoptotic cells may become floaters
Cell/ tissue samples were not completely homogenized	• Use Dounce homogenizer (increase the number of strokes); observe efficiency of lysis under microscope
Samples used after multiple freeze-thaw cycles	Aliquot and freeze samples, if needed to use multiple times
Presence of interfering substance in the sample	Troubleshoot as needed
Jse of old or inappropriately stored samples	Use fresh samples or store at correct temperatures until use
Measured at incorrect wavelength	Check the equipment and the filter setting
Cell samples contain interfering substances	Troubleshoot if it interferes with the kit (run proper controls)
mproperly thawed components	Thaw all components completely and mix gently before use
ncorrect incubation times or temperatures	Refer to datasheet & verify the correct incubation times and temperatures
ncorrect volumes used	Use calibrated pipettes and aliquot correctly
Air bubbles formed in the well/tube	Pipette gently against the wall of the well/tubes
Substituting reagents from older kits/ lots	Use fresh components from the same kit
Ise of a different 96-well plate	Fluorescence: Black plates; Absorbance: Clear plates
